

# iOptron®CEM40 Center-Balanced Equatorial Mount Instruction Manual

Please read the included CEM40 Quick Setup Guide (QSG) BEFORE taking the mount out of the case!

This product is a precision instrument and uses a magnetic gear meshing mechanism. Please read the included QSG before assembling the mount. Please read the entire Instruction Manual before operating the mount.

You must hold the mount firmly when disengaging the gear switches. Otherwise personal injury and/or equipment damage may occur. Any worm system damage due to improper operation will not be covered by iOptron's limited warranty.

If you have any questions please contact us at support@ioptron.com

# **WARNING!**

NEVER USE A TELESCOPE TO LOOK AT THE SUN WITHOUT A PROPER FILTER! Looking at or near the Sun will cause instant and irreversible damage to your eye. Children should always have adult supervision while using a telescope.

### 1. CEM40 Introduction

The iOptron® CEM40 mount is the next generation of center-balanced equatorial mounts. This mount is incredibly eye-pleasing, and its beauty is found in more than its appearance. The functionality of the mount is superb. Weighing in at only 15.8lbs., this mount can support a payload of up to 40lbs! That's incredible!

This mount also has an integrated electronic polar finder scope known as the iPolar. This tool ensures the accurate alignment of a telescope, even when the pole star is obscured. There are large levers on the quick-lock drive engagement system; these large levers make it easy to snap the gears into place.

Make way for an innovative mount! This iOptron CEM40 mount uses iOptron's patent-pending Universal Self-Centering Saddle (USCS). This saddle accommodates Losmandy and Vixen-style dovetail plates. The CEM40 also uses iOptron's ultra-quiet, low-power consumption stepper motor drive system, aiding the mount in providing precise tracking.

The iOptron CEM40 mount uses the Go2Nova® 8407 hand controller to navigate the night sky. This incredible technology helps observers find celestial objects with the aid of the mount's 212,000+ object database! For those looking for a telescope that has the capability of tracking and finding beautiful night sky objects, this mount is a must have tool.

#### Features:

- Unique design, Center-Balanced equatorial mount (CEM) for maximum payload and minimum mount weight
- Idea for both visual observation and astrophotography
- Maximum payload of 40 lbs (18 kg) with the mount weight of only 15.8 lbs (7.2 kg)
- All metal, CNC machined with red/black anodized
- Easy to use quick-lock gear clutches
- Integrated iPolar<sup>TM</sup> electronic polar finder
- Low periodic error: <±7 arc seconds for CEM40, < 0.25 arcsec RMS for CEM40EC</li>
- Permanent periodic error correction (PPEC) or Real-time periodic error correction (for CEM40EC)
- Precision stepper motor for precise GOTO and accurate tracking
- Go2Nova® 8407+ controller with Advanced GOTONOVA® GOTO Technology with built-in heater
- Integrated ST-4 autoguiding port
- 32-channel Global Positioning System (GPS)
- USB communication port
- Cable management system
- New, patent-pending iOptron universal saddle
- Standard 1.5 inch heavy-duty stainless steel tripod (5kg), optional 2" tripod or Tri-pier
- Optional WiFi module (iStarFi, #7434) for mount control via SmartPhone/Tablet/Computer

### 2. CEM40 Overview

### 2.1. Parts List1

#### SHIPPING CONTENTS

Your new CEM40 mount comes in two shipping boxes. One box contains either a CEM40 (#7400A) or CEM40EC (#7400ECA) mount head, hand controller, counterweight shaft, and accessories. The other box contains a 1.5" tripod and a 10lbs (4.5kg) counterweight. The contents are:

- iOptron<sup>®</sup> CEM40 telescope mount (#7400A, with black gear switches) or iOptron<sup>®</sup> CEM40EC mount (#7400ECA, high precision model with red gear switches)
- Go2Nova<sup>®</sup> 8407 Hand Controller
- One 10lbs (4.5 kg) counterweight
- Stainless steel counterweight shaft
- Internal iPolar electronic polar scope
- CEM40 GPS module
- AC adapter (100V-240V)
- 2X coiled control Cable (6P6C RJ11 to RJ11, straight wired)
- Serial cable (RS232 to RJ9)
- USB cable
- Aluminum carrying case (for CEM40EC)
- 1.5" tripod
- Quick Start Guide

#### **OPTIONAL PARTS**

- 2" tripod
- Tri-Pier (#8034)
- iStarFi wireless adapter (#7434)
- USB to RS232 Converter with FTDI chipset (#8435)

### ONLINE RESOURCES (click on the "Support" menu at www.iOptron.com)

- Instructional manual
- Tips for set up
- Hand controller and mount firmware upgrades (check online for latest version)
- iOptron ASCOM driver
- Reviews and feedback from other customers
- Accessories

<sup>1</sup> US market only. Actual contents, design and function may vary.

#### 2.2. Identification of Parts

Figure 1.CEM40 mount assembly

#### 2.3. CEM40 Mount Basic Cable Connection

Figure 2. Ports on a CEM40 mount

- OFF/ON (O/I): Power Switch
- DC 12V: DC power socket to power the mount (2.1mmX5.5mm, center positive)
- HBX (Hand Box): For connecting to an 8407 Hand Controller
- iPORT: Auxiliary port for connecting to other iOptron accessories, such as a GPS receiver, an iStarFi WiFi adapter, an electronic focuser or for observatory dome control. **DO NOT** plug ST-4 guiding camera cable into this port, It will damage the guide camera electronics.

USB: USB port for mount-computer control and firmware upgrade

### 2.4. CEM40 Cable Management

The CEM40 mount has a pre-wired Cable Management Panel (CMP). As shown in Figure 3, the Cable Management Panel has the following connections:

Figure 3.Cable management panel

- 1X USB 2.0 ports with standard type A connectors for connecting accessory;
- 1X DC12V power outlet (2.1mmX5.5mm, center positive, max. current 3A) for powering accessories such as CCD cameras, filter wheels, or electric focusers;
- GUIDE: ST-4 compatible autoguiding port. The wiring is shown in Figure 4

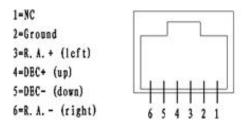

Figure 4. ST-4 Compatible Guiding Port Wiring

The USB-A port on the Cable Management Panel are connected to the USB-B connector on Input Panel, as shown in Figure 5.

Figure 5. Input panel

- 1x USB 2.0 port with a standard type B connector
- 1X iPolar USB port for internal iPolar electronic polar scope connection

There is a hole on dovetail saddle that allows a user to run his own cables down through the mount, to either the back of RA axle or bottom of the DEC axle.

Figure 6. Openings for custom cable management The CMP can also be moved from the back of the dovetail saddle to the front.

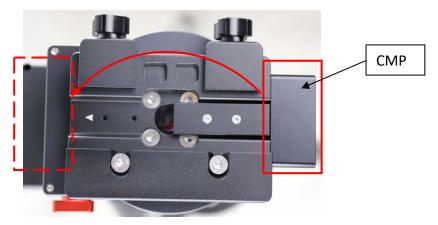

Figure 7. Top of the dovetail saddle

### 2.5. Go2Nova® 8407+ Hand Controller

The Go2Nova® 8407+ hand controller (HC) shown in Figure 8 is the standard controller used on the CEM40 mount. It has an integrated heater that ensures the LCD display will work at the temperature as low as -20°C(-4°F). It has a large LCD screen, function, direction, and number keys on the front; a red LED reading light on the back; and a HBX (6-pin) and a RS232 serial port (4-pin) at the bottom.

The CEM40 mount can be operated without the hand controller attached if it is controlled via a SmartPhone/Tablet/Computer.

Figure 8. Go2Nova® 8407+ hand controller

#### 2.5.1. Key Description

- MENU Key: Press "MENU" to enter the Main Menu.
- BACK Key: Move back to the previous screen, or end/cancel current operation, such as slewing.
- ENTER Key: Confirm an input, go to the next menu, select a choice, or slew the telescope to a selected object.
- Arrow (▲▼◀►) Keys: The arrow keys are used to control the movement of DEC and R.A. axes. Press and hold ▲(DEC+), ▼(DEC-) buttons to move a telescope along the DEC direction, ◄(R.A.+), ►(R.A.-) to move a telescope along the R.A. direction. They are also used to browse the menu or move the cursor while in the menu. Press and holding an arrow key for a fast scrolling.
- Number Keys: Input numerical values. Also used to adjust speeds (1: 1X; 2: 2X; 3: 8X; 4: 16X; 5: 64X; 6: 128X; 7: 256X; 8: 512X; 9: MAX)
- Light Key(☼): Turns on/off the red LED reading light on the back of the controller.
- Help (?) Key: Identify and display bright stars or objects that the telescope is pointing to.

- STOP/0 Key: Stop the mount during GOTO. Also toggling between starting and stopping tracking.
- HBX (Handbox) port: connect the HC to the CEM40 mount using a 6P6C RJ11 cable.
- Serial port: connect the HC to a computer via a RS232 to 4P4C RJ9 cable. The pin-out of the serial port is shown in Figure 9.

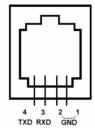

Figure 9. Serial port pin-out on an 8407+ hand controller

#### 2.5.2. The LCD Screen

The 8407+ HC has a large 8-line, 21-character per line, LCD screen which displays information on the status of the mount as shown in Figure 10.The user interface is simple and easy to operate.

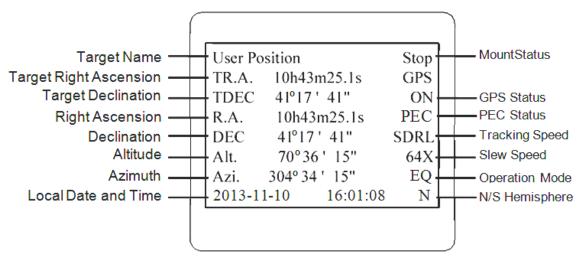

Figure 10. 8407+ HC LCD Information Screen

- 1. Target Name/Mount Position: displays the name of the target that telescope is currently pointed to or the current mount position.
  - Zero Position: The reference position for GOTO. The mount can move to Zero Position using "Goto Zero Position" or "Search Zero Position" command;
  - User Position: The mount is pointed to a user defined position, which could be a particular celestial object or simply a position determined by pressing an arrow key;
  - An object name, such as "Mercury" or "Andromeda Galaxy": Name of the star or celestial object that the mount is currently slewing to or tracking.
- 2. Target R.A.: Right Ascension (R.A.) of the target object.
- 3. Target Declination: Declination (DEC) of the target object.
- 4. Right Ascension: Current R.A. of the telescope.
- 5. Declination: Current DEC of the telescope.
- 6. Altitude: Altitude of the telescope (degrees vertical from the local horizon zenith is 90°).
- 7. Azimuth: Azimuth of the telescope (north is 0°, east is 90°, south is 180°, and west is 270°).

- 8. Local Date and Time: displays the local time in a format of YY-MM-DD HH:MM:SS.
- 9. Mount Status: Displays the current operational status of the mount.
  - Stop: mount is not moving;
  - Slew: mount is moving with an arrow key is pressed or a GOTO command, such as "Select and Slew" or "Goto Zero Position":
  - Tracking: mount is at a tracking status.
- 10. GPS status: When the power is turned on, the initial GPS status will be "GPS ON", which means that the mount is connected to its GPS receiver and is seeking a satellite signal. When the GPS receiver finds the satellites and receives the GPS signal the status will change to "GPS OK".
- 11. PEC status: Display of "PEC" here Indicates the Periodic Error Correction playback is turned on. Default is off.
- 12. Tracking speed: Displays the current tracking rate of the mount.
  - SDRL: mount is tracking at sidereal speed;
  - Solar: mount is tracking at solar speed;
  - · Lunar: mount is tracking at lunar speed;
  - King: mount is tracking at king speed;
  - CSTM: mount is tracking at a custom, user-defined speed.
- 13. Slew speed: The mount has 9 slew speeds: 1X, 2X, 8X, 16X, 64X, 128X, 256X, 512X, MAX (~4°/sec).
- 14. Operation Mode: EQ indicates that the mount is operating in an equatorial mode.

### 2.6. Bench Testing the Mount

The counterweight shaft is designed to counter balance the mount's own weight. It is recommended that the CW shaft is installed when testing the mount's function, as shown in Figure 11.

Figure 11. Setup for initial mount testing

Slewing the mount without the CW shaft installed *is not recommended*.

NEVER operate the mount with only the counterweight or OTA on it. It may damage the precision engineering of the mount drive system.

### 3. CEM40 Mount Assembly

### 3.1. CEM40 Mount Assembly

NOTE: The CEM40 mount is a precision astronomical instrument. It is highly recommended that you read this entire manual and become familiar with the nomenclature and function of all components before starting assembly.

WARNING: DO NOT rock the counterweight shaft rigorously. This may damage the worm/drive gear system and such damage will not be covered by warranty.

#### STEP 1. Remove the mount head from package

The mount head is shipped with the R.A. Gear Switch unlocked to protect the worm/gear system. Turn the Gear Switch 90° to lock the R.A. gear system before removing it from the box.

Figure 12. Mount in a hard case

#### STEP 2. Set up tripod

The tripod top is 120 mm in diameter with 2x M6 holes 103 mm apart for mounting. Two additional M6 holes are for the Alignment Peg (the one on top of a leg is for high latitude use; the other one between two legs is for low latitudes). Thread the Alignment Peg into the correct M6 hole. Insert the Accessory Tray through the center rod and secure the setup by tightening Locking Knob from underneath.

Figure 13. Tripod top

#### STEP 3. Attach the mount

Retract the 2x Azimuth (Azi) Adjustment Screws from both sides to leave ample space for the alignment peg to fit in between the 2 Azi Adjustment Screws. Remove the 2x Azi Locking Screws, with washers, from the mount base. Secure the mount head by tightening the Azi Locking Screws into the M6 holes on the tripod. An Allen wrench is included for convenience.

Figure 14. Attach the mount

Level the mount by adjusting the tripod legs. Use the build-in Bubble Level Indicator or an external leveler for this purpose.

#### STEP 4. Adjust latitude

Without any payload, slightly loosen the 4x Latitude Locking Screws. Use the Latitude Adjustment Knob to set the correct latitude value, as displayed in the Latitude Mark Window. Insert the Allen wrench into the Latitude Adjustment Knob for more turning torque.

Figure 15. Adjust latitude

Two latitude ranges, 0~35° and 25~60°, can be set up for the mount head. To change the latitude range from one to the other, **both** the Latitude Position Bolt and the Latitude Locking Screws need to be moved to the correct locations (see photos below).

Loosen the Latitude Locking Screws just enough to adjust the latitude setting to 30°. Move the Latitude Locking Screws with washers (one on each side) to the new locations revealed, do not tighten them just yet.

Figure 16. Latitude mark window

Unthread and remove the Position Bolt to its new location. Adjust the Latitude Adjustment Knob while holding the brass eyebolt until it lines up with the Position Bolt. Secure the Latitude Position Bolt.

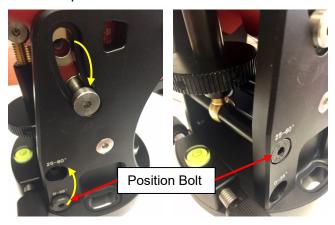

Figure 17. Change latitude range

#### STEP 5. Install Counterweight (CW) Shaft

Thread the CW shaft into the CW shaft mounting house. For low latitudes (<10°), a special CW mounting house is needed. (Contact iOptron for more information)

Figure 18. Install CW shaft

#### STEP 6. Install Counterweight(s)

Before putting on CW, make sure the mount is at its zero position, i.e., CW shaft points to the ground. **Disengage the R.A. Gear Switch to set the R.A. axis free before loading the CW.** Remove the CW Safety Cap at the end of CW Shaft. Glide the CW over the shaft with the larger hole opening facing down. Tighten the CW Locking Screw to hold the CW in place. Place the Safety Cap back onto the shaft. Move the CW to the bottom of the shaft and tighten the CW locking Screw.

Figure 19. Install Counterweight

You may need more CW for heavier payloads, or a smaller CW for lighter scopes.

#### STEP 7. Install Telescope

CEM40 is equipped with a 5" iOptron Universal Saddle. It can receive either a Vixen or a Losmandy-D plate by flipping both Stationary Block and Locking Block. This unique adjustable dovetail saddle enables the scope to sit at the center of the saddle.

The following graphics show how to change the dovetail saddle to fit either Vixen or Losmandy plate.

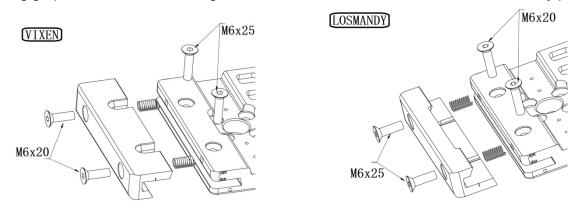

Figure 20. Switch the dovetail saddle from Vixen to Losmandy (Stationary Side)

Please Note that two sets of screws have different lengths and must swap location.

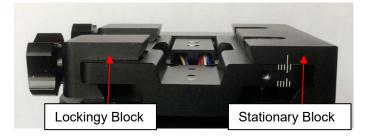

Figure 21. Vixen dovetail saddle

Figure 22. Losmandy dovetail saddle

After switch the Stationary and Locking Blocks, make sure that the alignment mark on the Stationary Block is aligned to one of the position marks on the saddle plate. If you have a wider dovetail plate, move the Stationary Block to an outside mark. For a narrow plate, move the Stationary Block to an inside mark. The marks are located on both end of the saddle plate.

#### STEP 8. Balance the Payload

After attaching the scope and accessories, the mount head assembly must be balanced in both DEC and RA axes to ensure minimum stresses on the mount driving mechanism.

CAUTION: The telescope may swing freely when the R.A. or DEC Gear Switch is disengaged. Always hold on to the mount and/or telescope assembly before releasing the Gear Switches to prevent it from swinging, which can cause personal injuries and/or equipment damages.

Set the mount at Zero Position. Disengage both RA and DEC gear switches and move the mount to horizontal position to check balance. Return to Zero Position for balance adjustment. Balance the DEC axis by moving the scope with accessories back and forth in the mount saddle or within the scope mounting rings. Balance the assembly in R.A. axis by moving CW along its shaft. Repeat the process until both DEC and RA axes are balanced.

CAUTION: The balancing process MUST be done with Gear Switch at the total disengaged position! Otherwise it might damage the worm system.

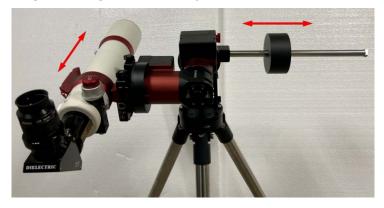

Figure 23. Balance a mount

Return the mount to Zero Position after balancing and engage gear switches.

#### STEP 9. Connect Cables

Plug in a 12V DC power supply to the DC12V POWER socket. Connect the Go2Nova® 8407 Hand Controller to the HBX port on the mount side panel.

Figure 24. Ports for cables

Plug GPS module into the iPORT with coiled cable. When powering on, GPS ON sign should be displayed at the upper right corner of the hand controller. If you want to use the iPort for another accessory, such as WIFI adapter (iStarFi #7434), or electronic focuser (#8451/#8452), you may disconnect the GPS module after it picks up satellites signals and displays GPS OK on hand controller. (It takes about 1 to 2 minutes in normal conditions).

#### STEP 10. Setting up the Hand Controller

The CEM40 mount is equipped with a GPS receiver which will receive the time, longitude and latitude information for your current location from satellites after a link is established. However, there are still some parameters which need to be entered to reflect your location, such as time zone information and whether daylight saving time is currently in effect. This information will be stored in the hand controller memory along with longitude and latitude coordinates until they need to be updated.

A clear sky and open space outside is needed for the GPS to establish a link with the satellites.

To set up the controller, press **MENU** =>"**Settings**":

Select and Slew
Sync. to Target
Alignment
Settings
Electric Focuser
PEC Options
Park Telescope
Edit User Objects

#### Press ENTER and select "Set Time and Site"

Set Time and Site
Beep Settings
Display Settings
Set Guiding Rate
Set Tracking Rate
Set Parking Position
Meridian Treatment
Set Altitude Limit

Press **ENTER**. A time and site information screen will be displayed:

Daylight Saving Time UTC -300 Minute(s) 2019-03-09 10:19:18

Longitude: W071d08m50s Latitude: N42d30m32s

Northern Hemisphere

#### Set Local Time

The time will be updated automatically when the GPS receiver has established its link to the satellites. In the event that the GPS module is unable to establish a link, local time can be entered manually. Use the ◀ or ▶ key to move the cursor and use the number keys to change the numbers. Use the ▲ or ▼ button to toggle between "Y" and "N" for Daylight Saving Time, or "+" and "-" for UTC (Coordinated Universal Time) setting. Hold the arrow key to fast forward or rewind the cursor.

In order to make the Hand Controller reflect your correct local time, **time zone information has to be entered.** Press the ◀ or ▶ key, move the cursor to the third line "**UTC -300 Minute(s)**" to set the time zone information (add or subtract 60 minutes per time zone). For example:

- Boston is "UTC -300 minutes"
- Los Angeles is "UTC -480 minutes"
- Rome is "UTC +60 minutes"
- Beijing is "UTC +480 minutes"
- Sydney is "UTC +600 minutes"

All the time zones in North America are "UTC –", as shown in the following table, so ensure the display shows "UTC -" instead of "UTC +".

Time Zone	Hawaii	Alaska	Pacific	Mountain	Central	Eastern
Hour behind UT	-10	-9	-8	-7	-6	-5
Enter UTC	-600	-540	-480	-420	-360	-300

To adjust minutes, move the cursor to each digit and use the number keys to input the number directly. Use ▲ or ▼ key to toggle between "+" and "-". When the time one information entered is correct, press ENTER and go back to the previous screen. **Note that fractional time zones can be entered.** 

Do not manually add or subtract an hour from displayed time to reflect Daylight Saving Time (DST). Only select "Y" after DST begins.

For other parts of the world you can find your "time zone" information from internet.

#### Set Observation Site Coordinates

The fifth and sixth lines display the longitude and latitude coordinates, respectively. The longitude and latitude coordinates will be automatically updated when the GPS picks up a satellite signal. "W/E" means Western/Eastern Hemisphere; "N/S" means Northern/Southern Hemisphere; "d" means degree; "m" means minute; and "s" means second.

If, for any reason, your GPS does not pick up the satellite signal, you can manually enter your longitude and latitude coordinates. Press the ◀ or ▶ key to move the cursor, use the ▲ or ▼ key to toggle between "W" and "E", and "N" and "S", and use the number keys to change the numbers. It is always a good idea to do your homework and get longitude and latitude coordinates before traveling to a new observation site.

The site coordinates information can be found from your smart phone, GPS receiver or via the internet. Site information in decimal format can be converted into d:m:s format by multiplying the decimal

numbers by 60. For example, N47.53 can be changed to N47°31'48":  $47.53^{\circ} = 47^{\circ} + 0.53^{\circ}$ ,  $0.53^{\circ} = 0.53 \times 60' = 31.8'$ ,  $0.8' = 0.8 \times 60'' = 48''$ . Therefore,  $47.53^{\circ} = 47^{\circ} 31' 48''$  or 47d31m48s.

#### Select N/S Hemisphere

The northern/southern hemisphere will be determined by your latitude coordinate, with one exception. If your are near the equator (within +/- 10°), you can choose your own N/S setting.

If the polar axis is aligned to the North Celestial Pole, then set the mount to Northern Hemisphere. If the polar axis is pointing to the South Celestial Pole, set the mount to Southern Hemisphere. Press the ◀ or ▶ key to move the cursor and use the ▲ or ▼ key to toggle between "Northern Hemisphere" and "Southern Hemisphere".

The time and site information will be stored inside the hand controller's memory chip. If you are not traveling to another observation site, they do not need to be changed.

#### Check the Hand Controller Battery

The hand controller has a real time clock (RTC) which should display the correct time every time the mount is turned on. If the time is incorrect, please check the battery inside the hand controller and replace it if required. The battery is a 3V, CR1220 button battery.

#### STEP 11. Set the Zero Position

Zero Position is the mount starting reference point which ensures the GOTO performance. Press **MENU** => "**Zero Position**" => "**Search Zero Position**" to let the mount search the Zero Position. Follow the instruction on hand controller display to adjust the Zero Position if RA or DEC is not aligned. Or press **MENU** => "**Zero Position**" => "**Set Zero Position**", to manually set the mount to Zero Position. Loosen the DEC and R.A. Gear Switches in turn to adjust the mount to the Zero Position. Engage the clutches after each adjustment.

#### STEP 12. Perform Polar Alignment

#### Polar Alignment with iPolar Electronic Polar Scope

CEM40 & CEM40EC are equipped with an iPolar<sup>TM</sup> electronic polar scope. To perform polar alignment, please refer to **Appendix C**. It is simple and fast, even the pole star or part of the sky is blocked. Steps are briefly outlined below:

- Download and install iPolar Software (first time use)
- Connect a USB cable between the iPolar port on the mount and a computer USB port
- Calibrate the iPolar Rotation Center (first time use)
- Click Connect and start polar alignment by following on screen instructions

#### **Quick Polar Alignment**

If the mount equipped with a AccuAlign<sup>TM</sup> optical polar scope, you can use the Quick Polar Alignment procedure to perform the polar alignment. One of the CEM40's unique features is that the polar scope can be used at anytime as it is not blocked by DEC axle as is the case in a German Equatorial Mount. This makes it possible to adjust the polar alignment while the mount is tracking.

As indicated in Figure 25, the Polar Scope reticle has been divided into 12 hours along the angular direction with 20-minute tics. There are 6 concentric circles in 2 groups of 3 marked from 36' to 44' and 60' to 70', respectively. The 36' to 44' concentric circles are used for polar alignment in the Northern Hemisphere using Polaris, while the 60' to 70' circles are used for polar alignment in Southern Hemisphere using Sigma Octantis.

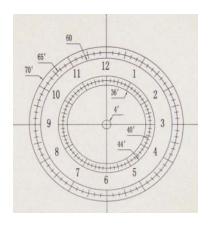

Figure 25. Polar Scope

Figure 26. Connect polar scope LED

To perform the polar alignment:

- (1) Level the CEM40 mount and set it to the Zero Position. Make sure the telescope optical axis is parallel to the polar axis (R.A. axis) of the mount. If using a finder scope, adjust it to be parallel to the telescope optical axis.
- (2) Remove both the Polar Axis Cover and Polar Scope Cover. Thread the polar scope LED to the Polar Scope. Connect one end of the polar scope power cable to the illumination LED and the other end to the DC12V output located on DEC Cable Management Panel (Figure 26).
- (3) Turn the mount power on. Use the Hand Controller ("Settings" => "Polar Scope Brightness") to set the illumination intensity.
- (4) Adjust the polar scope dial to rotate the 12 o'clock at the top.
- (5) Use the Hand Controller (**MENU** => "**Alignment**" => "**Position of Polaris/SigmaOct**") to display the current position of Polaris on the LCD screen, as indicated in the left side of the figure below. For example, June 22, 2014, 20:19:42 in Boston, US (long. W71°08'50" and lat. N42°30'32", UTC 300 min,) the Polaris Position is 0h45.8m and 40.4m.

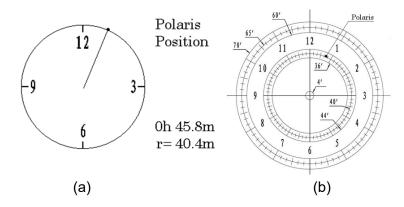

Figure 27. Polaris Position shown on HC (a) and where to put on polar scope reticle (b)

(6) Look through the polar scope to find the Polaris. Use the Azimuth and Latitude Adjustment Knobs to adjust the mount in both directions and put the Polaris in the same position on the Polar Scope reticle as indicated on the HC display screen. In this case, Polaris will be located at a radius of 41.5 minutes and an angle of 1 hour 26.8 minutes, as shown In Figure 27 (b).

NOTE: If you are located in the Southern Hemisphere, Sigma Octantis will be chosen for Polar Alignment.

#### BrightStar Polar Alignment

If you mount does not have a iPolar installed, or the pole star is not in sight, you may use two bright stars with **Polar Iterate Align** to do the polar alignment.

- (1) Level the mount and set it to the Zero Position. Align the telescope to the R.A. axis of the mount. If a finder scope is used, adjust it to be parallel to the telescope optical axis.
- (2) Use the HC (**MENU** => "**Alignment**" => "**Polar Iterate Align**") to display the azimuth and altitude position of several bright stars near the meridian. Select one that is visible at a high altitude as Alignment Star A. Follow the HC instruction to move Alignment Star A to the center of the eyepiece using a combination of the Latitude Adjustment Knob and the "◄" or "▶" buttons. Press **ENTER** to confirm when the star is centered. Next, select a bright star that is close to the horizon as Alignment Star B. Center it using the Azimuth Adjustment Knob and the "◄" or "▶" button (the "▲" and "▼" buttons are not used here). Press **ENTER** to confirm the settings.
- (3) The telescope will now slew back to Alignment Star A. Repeat the steps above. The iteration can be stopped when it is determined that the alignment error has been minimized. Press the **BACK** button to exit the alignment procedure.

**NOTE:** It is highly recommended to use an eyepiece with an illuminated crosshair for accurate centering.

**NOTE:** The movement of the alignment star in your eyepiece may not be perpendicular depending on its location in the sky.

#### STEP 13. Returning the Mount to Zero Position

After polar alignment and balancing OTA, return the mount to the Zero Position. Please check the zero position after set up the mount or firmware update.

### 4. Getting Started

In order to experience the full GOTO capability of GOTONOVA® technology it is very important to set up the mount correctly before observation.

### 4.1. Setting the Mount and Performing Polar Alignment

Assemble your CEM40 mount according to Section 3.1. Make sure the mount is leveled. Turn the mount power switch on. When the GPS receiver is connected to satellites, the hand controller LCD will display GPS OK and the mount will have the correct time and site information (this can also be entered manually as previously described). Mount an OTA and accessories, and carefully balance the mount on both R.A. and DEC axes. Perform the polar alignment.

After the mount is powered on, perform **MENU** => "**Zero Position**" => "**Goto Zero Position**" to check the Zero Position, i.e. with the counterweight shaft pointing to ground, OTA at the highest position with its axis parallel to the polar axis and the telescope pointing to the Celestial Pole. If the mount is not at the Zero Position, you may perform **Search Zero Position** or **Set Zero Position** to set the Zero Position.

### 4.2. Manual Operation of the Mount

The mount can now be used to observe astronomical objects using the HC. Use the arrow keys ( $\triangleright$ ,  $\triangleleft$ ,  $\triangledown$ , and  $\triangle$ ) to point the telescope to the desired part of the sky. Use the number keys to change the slewing speed. Press the **STOP/0** button to start tracking.

### 4.3. One Star Alignment

After the mount set up, perform a "One Star Align" to correct the Zero Position discrepancy, or linear error.

Press **MENU** => "**Alignment**" => "**One Star Align**" to perform "**One Star Align**." The hand controller will display an alignment star. Select a different star using the ▲ or ▼ keys. Then press **ENTER**. After the mount slews to the target, use the arrow keys to center it in your eyepiece. Then press **ENTER**. (More details on the alignment function are given in section 5.3)

### 4.4. GOTO the Moon and Other Objects

Now the mount is ready for GOTO operation which, using advanced GOTONOVA® technology, will automatically slew to, and track, a huge range of celestial targets. We will use the Moon as an example.

Press **MENU** => "**Select and Slew**". Select a category, in this example "**Solar System**", and then select an object of interest, in this case "**Moon**". Press **ENTER** and the telescope will slew to the moon and automatically start tracking. If the target is not centered in your eyepiece, use the arrow keys to center it. Then use **MENU** => "**Sync to Target**" for better performance.

#### 4.5. Star Identification Function

The 8407+ hand controller has a star identification function. After setting the correct local time and location and completing polar alignment, slew the telescope to a bright star manually or using the GOTO function. Press the Help(?) key to identify the star that the telescope is pointing to, as well as nearby bright stars if there is any.

#### 4.6. Power-Down Memorization

The CEM40 mount can memorize its R.A. and DEC positions if the mount power is lost during operation, even during high speed slewing. After the power is back, just do a **Select and Slew** to the same star when the power is lost. The mount will continue to track the star.

### 4.7. Turning Off the Mount

When you have finished your observation, simply turn the mount power off and disassemble the mount and tripod.

If the mount is set up on a pier or inside an observatory, it is recommended that you return the mount to the Zero Position or park the telescope. This will ensure that there is no need for you to perform the initial setup again when you power on the mount subsequently so long as the mount has not been moved from the parked position.

### 4.8. Putting the Mount Back into the Carrying Case

It is recommended to disengage the gear system for transportation.

## 5. Complete Functions of Go2Nova® 8407+ Hand Controller

#### 5.1. Select and Slew

Press the **MENU** button. From the main menu select "**Select and Slew**". Select an object that you would like to observe and press the **ENTER** key.

The Go2Nova<sup>®</sup> 8407+ hand controller has a database of around 212,000 objects. Use the  $\blacktriangleright$  or  $\blacktriangleleft$  buttons to move the cursor. Use the number buttons to enter a number, or the  $\blacktriangledown$  or  $\blacktriangle$  buttons to change a number. Hold a button to fast scroll through the list. The " $\stackrel{\triangle}{\sim}$ "symbol indicates that the object is above the horizon, and the " $\stackrel{\triangle}{\sim}$ " symbol means it is below the horizon. In some catalogs the stars below the horizon will not be displayed on the hand controller.

#### 5.1.1. Solar System

There are 9 objects in the Solar System catalog.

#### 5.1.2. Deep Sky Objects

This menu includes objects outside our Solar System such as galaxies, star clusters, quasars, and nebulae.

- Named Objects: consists of 92 popular deep sky objects with their common names. A list of named deep sky objects is included in Appendix E.
- Messier Catalog: consists of all 110 Messier objects.
- NGC Catalog: consists of 7,840 objects.
- IC Catalog: consists of 5,386 objects.
- PGC Catalog: consists of 73,197 objects.
- Caldwell Catalog: consists of 109 objects.
- Abell Catalog: consists of 4,076 objects.
- Herschel Catalog: consists of 400 objects.

#### 5.1.3. Stars

- Named Stars: consists of 259 stars with their common names. They are listed alphabetically;
   a list is included in Appendix E.
- Double/Multi Stars: consists of 208 double/multi stars; a list is attached in Appendix E.
- Hipparcos Catalog: the new HIP catalog consists of 120,404 records (2008).

#### 5.1.4. Comets

This catalog contains 15 comets.

#### 5.1.5. Asteroids

This catalog contains 116 asteroids.

#### 5.1.6. Constellations

This catalog consists of 88 modern constellations. They are listed alphabetically; a list is attached in Appendix E.

#### 5.1.7. Custom Objects

This allows the storage of up to 60 user-defined objects, including comets.

#### 5.1.8. Custom R.A. and DEC

Here you can go to a target by entering its R.A. and DEC coordinates.

### 5.2. Sync to Target

This operation will match the telescope's current coordinates to the Target Right Ascension and Declination. It can be used to correct GOTO pointing error. After slewing to an object, press **MENU** - then scroll to "**Sync to Target**" and press **ENTER**. Follow the screen to perform the sync. Using this function will re-align the telescope to the selected object. Multiple syncs can be performed if needed. This operation is useful to find a faint star or nebula near a bright star.

"Sync to Target" will only work after "Select and Slew" is performed. You can change the slew rate to make the centering procedure easier. Simply press a number (1 through 9) key to change the speed. The default slew rate is 64x.

### 5.3. Alignment

This function is used for aligning the telescope to the celestial pole and to create a sky model to calibrate the mount's GOTONOVA® functionality.

The system provides four alignment methods to calibrate the mount's GOTO function: "Solar System Align", "One Star Alignment", "Two Star Alignment" and "Three Star Alignment". The "Two Star Alignment" may be used to refine the polar alignment.

The mount has to be set to Zero Position before performing any alignment.

### 5.3.1. Position of Polaris/SigmaOct

This function displays the position of the Pole Star for *Quick Polar Alignment* using the iOptron<sup>®</sup> AccuAlign<sup>TM</sup> polar scope. In the Northern Hemisphere the position of Polaris is displayed, while in the Southern Hemisphere the position of Sigma Octantis is shown.

#### 5.3.2. One Star Alignment

Press **MENU** => "**Alignment**" => "**One Star Align**". A list of alignment stars that are above the horizon is computed based on your local time and location. With the mount in the Zero Position, use the ▲ and ▼ buttons to select a star and press **ENTER**. Center the target in your eyepiece using the arrow keys. Press **ENTER** when finished. If your mount is set up correctly and polar aligned, one star alignment should be sufficient for good GoTo accuracy. To increase the pointing accuracy over the sky, you may choose to do a three star alignment.

#### 5.3.3. Two Star Alignment

**Two Star Alignment** can be used to improve the accuracy of the mount's polar alignment. Press **MENU** => "**Alignment**" => "**Two Star Alignment**" A list of alignment stars that are above the horizon is computed based on your local time and location. With the mount at the Zero Position, use the ▲ and ▼ buttons to select the first alignment star and press **ENTER**. Center the target in your eyepiece using the arrow keys after the mount slews to it. Press **ENTER** when finished. The hand controller will prompt you to choose a second star. After centering the second star, the two-star alignment is finished.

After **Two Star Alignment**, the altitude and azimuth errors will be displayed. This number can be used to fine tune the Quick Polar Alignment.

For example, if the screen shows 7.5" low and 4.3" east, it means that THE MOUNT axis is pointing lower than and to the east of the Celestial Pole.

#### 5.3.4. Three Star Alignment

The three-star alignment will further determine the cone error between the OTA and mount axis. The system will use these data to calculate the goto model. If the cone error is big enough, it is suggested to shim the OTA in DEC to minimize it.

Press **MENU** => "**Alignment**" => "**Three Star Alignment**," a list of alignment stars that are above the horizon is computed based on your local time and location. With the mount at the Zero Position, use the ▲ and ▼ buttons to select the first alignment star and press **ENTER**. Center the target in your eyepiece using the arrow keys. Press **ENTER** when finished. The hand controller will prompt you to choose a second star. Select third star after the mount aligned to the second star.

The system will display the pointing and cone errors after the three star alignment is accepted. The system will update the pointing model accordingly.

#### 5.3.5. Solar System Align

This function uses a planet or the moon as an alignment object. Press **MENU** => "**Alignment**" => "**Solar System Align**" for a list of available alignment objects.

### 5.3.6. Polar Iterate Align

This alignment method allows you to polar align the mount even if you cannot view the Celestial Pole. Press the **MENU** button, then select "**Alignment**" and "**Polar Iterate Align**". The HC will display a list of bright alignment stars near the meridian as Alignment Star A. Follow the HC instructions to move Alignment Star A to the center of the eyepiece using a combination of the Latitude Adjustment Knob and the "◄" and "▶" buttons. Press **ENTER** to confirm the settings. Next, select a bright star that is close to the horizon as Alignment Star B. Center it using the Azimuth Adjustment Knobs and the "◄" and "▶" buttons (the "▲" and "▼" buttons will not function). Press **ENTER** to confirm the settings.

The telescope will now slew back to Alignment Star A to repeat the above steps. The iteration can be stopped when it is determined that the alignment error has been minimized. Press the **BACK** button to exit the alignment procedure.

**NOTE:** It is highly recommended to use an eyepiece with illuminated crosshairs for accurate centering.

**NOTE:** The movement of the alignment star in your eyepiece may not be perpendicular depending on its location in the sky.

#### 5.3.7. View Model Error

This will display linear RA error, linear DEC error, polar misalignment, non-perpendicular between OTA and DEC, and non-perpendicular between HA and DEC.

#### 5.3.8. Clear Alignment Data

This will clear all alignment data created during star alignment process. If you are controlling the mount using planetarium software via ASCOM, and the software has its own alignment function, *please clear the alignment data*.

### 5.4. Settings

#### 5.4.1. Set Time and Site

Refer to STEP 9 in Section 3.1.

#### 5.4.2. Beep Ettings

The Hand Controller allows a user to turn off the beep partially, or even go to a silent mode. To change this setting press "**MENU =>Settings => Beep Settings**",

```
Set Up Time and Site
Beep Settings
Display Settings
Set Guiding Rates
Set Tracking Rate
Set Parking Position
Meridian Treatment
Set Altitude Limit
```

Select one of three available modes:

- "Always On" a beep will be heard on each button operation or mount movement;
- "On but Keyboard" a beep will be heard only when the mount is slewing to the object or there is a warning message;
- "Always Off" all sounds will be turned off, including the SUN warning message.

#### 5.4.3. Display Settings

Press "MENU =>Settings =>Set Display",

```
Set Up Time and Site
Beep Settings
Display Settings
Set Guiding Rates
Set Tracking Rate
Set Parking Position
Meridian Treatment
Set Altitude Limit
```

Use the arrow keys to adjust LCD display contrast, LCD backlight intensity, and keypad's backlight intensity.

#### 5.4.4. Set Guiding Rate

Press MENU => "Settings" => "Set Guiding Rates",

```
Set Up Time and Site
Beep Settings
Display Settings
Set Guiding Rates
Set Tracking Rate
Set Parking Position
Meridian Treatment
Set Altitude Limit
```

This is an advanced function for autoguiding when a guiding camera is used either via a Guide Port (ST-4) or using the ASCOM protocol. Before autoguiding, align the polar axis carefully. Select an appropriate guiding speed. The latest firmware allows you to set the R.A. and DEC guiding speed differently. The R.A. guiding speed can be set between  $\pm 0.01X$  to  $\pm 0.90X$  sidereal rate. The DEC guiding speed can be set between  $\pm 0.10X$  to  $\pm 0.99X$  sidereal rate. Follow the instructions of your autoguiding software for detailed guiding operation.

The guide port wiring is shown in **Figure 4**, which has same pin-out as that from Celestron / Starlight Xpress / Orion Mount / Orion Autoguider/ QHY5 autoguider.

If you have an autoguider which has the same pin-out as the ST-I from SBIG, such as Meade/Losmandy/ Takahashi/ Vixen, make sure a proper guiding cable is used. Refer to your guiding camera and guiding software for detailed operation.

WARNING: DO NOT plug your ST-4 guiding camera cable into the iOptron port or HBX port. It may damage the mount or guiding camera electronics.

### 5.4.5. Set Tracking Rate

You can set up the mount tracking rate by selecting "Set Tracking Rate".

Set Up Time and Site
Beep Settings
Display Settings
Set Guiding Rates
Set Tracking Rate
Set Parking Position
Meridian Treatment
Set Altitude Limit

Then the user can select "Sidereal Rate", "Lunar Rate", "Solar Rate", "King Rate", and "Custom Rate". The "Custom Rate" can be adjusted from 0.9900X to 1.0100X of sidereal.

The "**King Rate**", developed by Edward S. King, corrects the tracking rate of a telescope to account for atmospheric refraction. This is more useful for unguided tracking.

#### 5.4.6. Set Parking Position

You may park the telescope before powering off the mount. This is very useful if the mount is on a permanent pier or the mount will not be moved in between observation sessions. The mount will keep all the alignment info and reference points.

There are six parking positions. Two positions that park the scope horizontally (**Horizon Position**). Two positions that park the scope vertically (**Zenith Position**). "**Current Position**" will park the scope at its current position. Alternatively, you can enter any altitude and azimuth combination for "**Custom Parking Pos**.". When the mount is turned on, it will use the last parking position setting as the default setting.

#### 5.4.7. Meridian Treatment

This function tells the mount what to do when it tracks past the meridian. You can tell the mount if it needs a meridian flip and when to do it.

- "Set Position Limit" will tell the mount when to stop tracking or to do a meridian flip. The limit can be set at from 0° to 15° (1 hour) pass meridian for Northern Hemisphere and 0° to 10° for Southern Hemisphere.
- "Set Behavior" will tell the mount if a meridian flip will be performed.

#### 5.4.8. Set Altitude Limit

This function allows the mount to keep tracking an object even if it is below the horizon but can still be seen, for example from an elevated observation site, such as a hill. The range can be set from -89° to +89°. The default limit is 00°. **Be careful when setting this limit.** It may cause mount goto problems.

#### 5.4.9. Polar Scope Bright.

Use this function to adjust the light intensity of the CEM40 illuminated polar scope.

#### 5.4.10. HC Heating Switch

Turn on/off the controller LCD back heater. When "**Heating ON**" is selected, the heater will be automatically turned on when the ambient temperature reaches 0°C (32°F) and shut off at 10°C.

#### 5.4.11. Set RA Guiding

The function is for the EC version of the CEM40 only. You can turn off R.A. guiding by selecting "Filter R.A. Guiding" to allow the high precision encoder to correct the tracking error, or turn the R.A. guiding on by selecting "Allow RA Guiding" to allow the mount to receive guiding corrections from the guiding software. The power on default setting is "Allow RA Guiding".

#### **5.4.12. Language**

Select one of supported menu languages. Currently it has English and Chinese.

### 5.5. Electric Focuser

This function controls an iOptron electric focuser.

### 5.6. PEC Option

This function only works for the standard CEM40 mount.

#### 5.6.1. PEC Playback

You can turn "PEC Playback On" to improve tracking accuracy which is especially useful for long exposure astrophotography. The default status is "PEC Playback Off" when the mount is turned on.

#### 5.6.2. Record PEC

All equatorial mounts have a small variation in the worm gears which may be corrected by using Period Error Correction or PEC. PEC is a system which improves the tracking accuracy of the mount by compensating for variations in the worm gear and is especially useful when doing astrophotography without autoguiding. Because the variations are regular, it is possible to record the corrections required to cancel out the worm gear variations and to play them back to correct the periodic error caused by the variations.

In order to use the PEC function, the Go2Nova<sup>®</sup> hand controller first needs to record the periodic error. The periodic error of the worm gear drive will be used to correct periodic error.

To use the PEC function:

- 1. Setup the mount with a telescope in autoguiding configuration by connecting a guiding camera via the mount's Guide Port or using the ASCOM protocol;
- 2. Select "**MENU=>Settings => Set Guiding Rates**". Set a guiding speed from 0.10X to 0.90X. The default setting is 0.50X;
- 3. Then press the **BACK** button and select "**PEC Option**" from the menu. Use the ▲ and ▼ scroll buttons to display the "**Record PEC**" option and press **ENTER** to start recording the periodic error.
- 4. It takes the worm gear 400 seconds to make one complete revolution. After 400 seconds PEC will automatically stop recording. The PEC value will be permanently stored inside PEC chip on R.A. motor drive until a new data are recorded.
- 5. If you want to re-record the periodic error, select "**Record PEC**" and repeat the recording processes again. The previously recorded information will be replaced with the current information.

#### 5.6.3. PEC Data Integrity

This function will check the recorded PEC data integrity.

### 5.7. Park Telescope

This function parks the scope to one of four preset park positions.

### 5.8. Edit User Objects

Besides various star lists available in the hand controller, you can add, edit or delete your own user-defined objects. This is especially useful for newly found comets. You can also add your favorite observation object into the user object list for easy sky surfing. Up to 60 comets and other user objects can be stored.

#### 5.8.1. Enter a New Comet

Press "MENU =>Edit User Objects" to set user objects.

```
User Defined Comet
Other Objects
```

Select "**User Defined Comet**" to add/browse/delete the user-defined comet list. Find the orbit parameters of a comet in the SkyMap format. For example, the C/2012 ISON has an orbit parameter:

No.	Name	Year	М	Day	q	е	ω	Ω	I	Н	G
C/2012	S1 ISON	2013	11	28.7960	0.0125050	1.0000030	345.5088	295.7379	61.8570	6.0	4.0

#### Select "Add a New Comet" to add a new one:

```
Add a New Comet
Browse Comets
Delete a Comet
Delete All Comets
```

The hand controller will display the parameter entry screen:

```
Enter Comet Parameter
Date: 0000-00-00.0000
q: 0.000000
e: 0.000000
ω: 000.0000
Ω: 000.0000
i: 000.0000
```

Enter the parameters using the arrow buttons and number keys. Press **ENTER** and a confirmation screen will be displayed. Press **ENTER** again to store the object under the assigned user object number, or press **BACK** button to cancel.

#### 5.8.2. Enter Other Objects or Observation List

Press "MENU =>Edit User Objects" to set user objects.

```
User Defined Comet
Other Objects
```

Select "Other Objects" to enter you own object:

Add a New Object
Browse Objects
Delete One Object
Delete All Objects

Select "Add a New Object". A screen will be displayed asking you to Enter R.A. and DEC coordinates:

Enter R.A. and DEC

R.A.: 00h00m00s

DEC: +00d00m00s

You may enter the R.A. and DEC coordinates of the object you want to store, and press **ENTER** to confirm.

A more useful application of this function is to store your favorite viewing objects before heading to the field. When the "Enter R.A. and DEC" screen appears, press the MENU button. It brings up the catalogs that you can select the object from. Follow the screen instructions to add your favorite objects. Press BACK button to go back one level.

Press the **BACK** button to go back to the object entry submenu. You may review the records or delete those that are no longer wanted. Press the **BACK** button to finish the operation. Now you can slew to your favorite stars from "**Custom Objects**" catalog using "**Select and Slew**."

#### 5.9. Firmware Information

This option will display the mount type, firmware version information for the hand controller (HC), Main board (Main), R.A. board (RA), DEC board (DEC) and star catalog.

### 5.10. Zero Position

#### 5.10.1. Goto Zero Position

This moves your telescope to its Zero Position.

#### 5.10.2. Set Zero Position

This set the Zero Position for the firmware.

The Zero Position reference will be an undefined value after firmware upgrade, or it may lost during power outage or HC battery replacement. You can use this function to set the zero position reference.

Press the **ENTER** after moving the mount to Zero Position either manually or with the hand controller.

#### 5.10.3. Search Zero Pos.

In the event of power failure, the mount will lose all its alignment information. This can be very troublesome if the mount is being operated from a remote observation site and is controlled via the internet. To counter this, the CEM40 has been equipped with a function that can find the Zero Position for an initial mount set up.

Select "Search Zero Pos." and the mount will start to slew slowly and find the R.A. and DEC position to set the mount to the Zero Position. When the mount has found the Zero Position, the HC will ask if you want to calibrate the Zero Position. Press ENTER to confirm. Use the arrow button to adjust the mount in RA and DEC to correct the obvious discrepancy in the Zero Position. Alternatively, press BACK to cancel.

### 6. Maintenance and Servicing

#### 6.1. Maintenance

The CEM40 mount is designed to be maintenance free. Do not overload the mount. Do not drop the mount as this will damage the mount and / or permanently degrade GoTo performance and tracking accuracy. Use a wet cloth to clean the mount and hand controller. Do not use solvent.

If your mount is not to be used for an extended period, dismount the OTAs and counterweight(s).

### 6.2. iOptron Customer Service

If you have any question concerning your CEM40 mount contact iOptron Customer Service Department. Customer Service hours are from 9:00 AM to 5:00 PM, Eastern Time, Monday through Friday. In the event that the CEM40 requires factory servicing or repairing, write or call iOptron Customer Service Department first to receive an RMA# before returning the mount to the factory. Please provide details as to the nature of the problem as well as your name, address, e-mail address, purchase information and daytime telephone number. We have found that most problems can be resolved by e-mails or telephone calls, so please contact iOptron first to avoid returning the mount for repair.

It is strongly suggested that to send technical questions to <a href="mailto:support@ioptron.com">support@ioptron.com</a>. Call in the U.S. 1.781.569.0200.

### 6.3. Product End of Life Disposal Instructions

This electronic product is subject to disposal and recycling regulations that vary by country and region. It is your responsibility to recycle your electronic equipment per your local environmental laws and regulations to ensure that it will be recycled in a manner that protects human health and the environment. To find out where you can drop off your waste equipment for recycling, please contact your local waste recycle/disposal service or the product representative.

### 6.4. Battery Replacement and Disposal Instructions

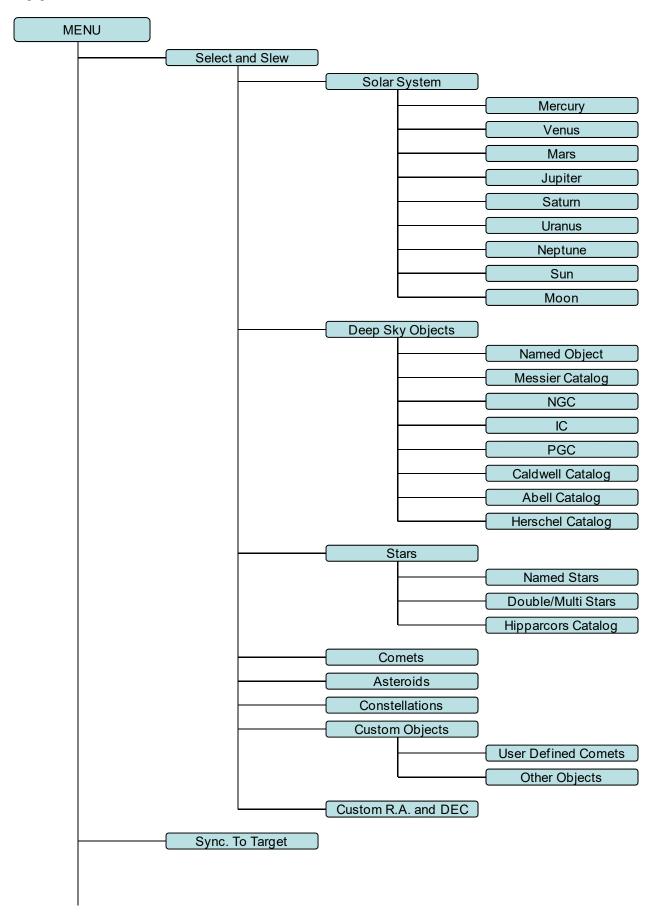

Battery Disposal: Batteries contain chemicals that, if released, may affect the environment and human health. Batteries should be collected separately for recycling, and recycled at a local hazardous material disposal location adhering to your country and local government regulations. To find out where you can drop off your waste battery for recycling, please contact your local waste disposal service or the product representative.

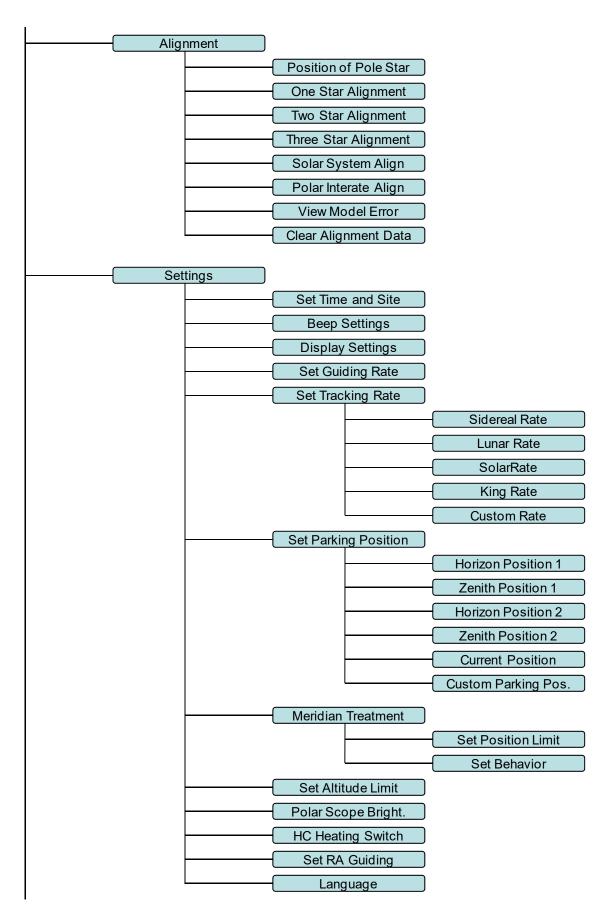

# **Appendix A. Technical Specifications**

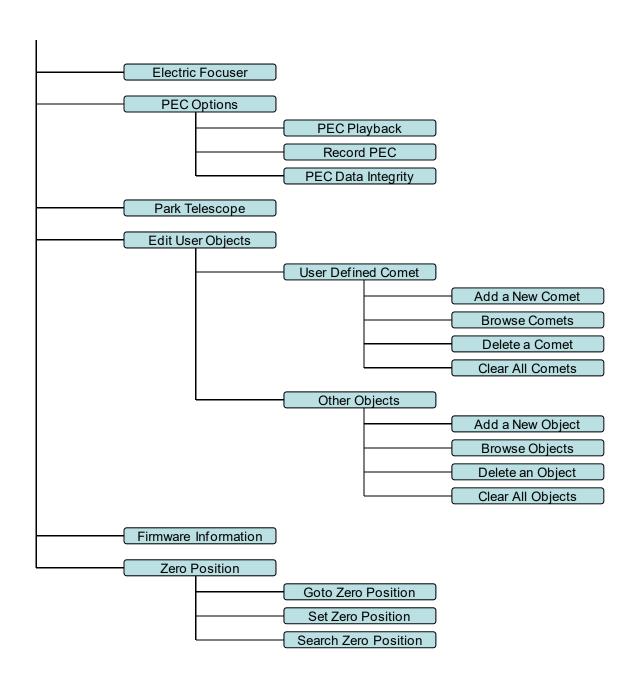

Mount	Center-balanced Equatorial Mount (CEM)				
Max payload*	40 lb (18kg), exclude counterweight				
Mount weight	15.8 lb (7.2kg)				
Payload/Mount weight ratio	2.5:1				
Structure Material	All metal, CNC machined				
Exterior finish	Anodized red/black				
Latitude adjustment range	0°~ 60° (special CW shaft mounting if <10°)				
Azimuth adjustment range	± 6°				
Right Ascension worm wheel	Ф110mm, 216 teeth aluminum				
Declination worm wheel	Ф110mm, 216 teeth aluminum				
PEC	PPEC/Real time PEC				
Tracking accuracy (PE)**	<±7 arcsec p-p (#7400A), or				
Tracking accuracy (FE)	<0.25 arcsec RMS for 400sec (#7400ECA)				
Counterweight shaft	Φ20x 410 mm Stainless Steel (1kg)				
Counterweight	10 lb (4.5 kg)				
Mount base size	Ф120 mm				
Motor drive	Precision stepper motor, 1.8º/128X micro-step				
Motor resolution	0.08 arc seconds				
Slew speed	1×,2×,8×,16×,64×,128×,256×,512×,MAX(~4.5°/sec)				
Power consumption	0.6A(Tracking), 0.9A(GOTO)				
Power requirement	12V DC 5A				
AC adapter	100V ~ 240V (included)				
Polar Scope	Internal iPolar™ electronic polar scope				
Level indicator	Level bubble				
Dovetail saddle	iOptron Universal Saddle, 5"				
Hand Controller	Go2Nova <sup>®</sup> 8407+,212,000 objects database, star recognition				
Meridian treatment	Stop (0-14° pass), auto flip				
GPS	Yes				
WIFI	External (optional)				
Autoguide port	ST-4				
Communication port	USB Port (on mount)				
PC computer control	Yes (ASCOM)				
Cable management	USB2.0, DC12V (MAX 3A), ST4				
Operation temperature	-10°C ~ +40°C				
Tripod	1.5" Stainless Steel(5kg), optional 2" or tri-pier				
Warranty	Two year limited				

<sup>\*</sup> OTA size and length dependent
\*\* Measured with encoder, 400 seconds

# Appendix B. Go2Nova® 8407+ HC MENU STRUCTURE

### Appendix C. Polar Alignment using iPolar Electronic PolarScope

Please refer to iPolar (#3399) product page for latest update.

#### 1. Connect iPolar to a PC and Download iPolar Software

- (1) Connect the iPolar Electronic PolarScope to your PC USB port;
- (2) The iPolar driver will be automatically installed if it is the first time connecting to the computer;
- (3) You should see "iOptron iPolar" under Camera catalog in computer Device Manager;
- (4) Goto www.ioptron.com to download iPolar software and save on your computer;
- (5) The iPolar software needs Windows Vista, 7, 8, 8.1, 10 or later version, 32 bit or 64 bit operation system, with .NET Framework 4.6 or later version.

#### 2. Polar Alignment

#### **Step 1: Adjust CEM40 Pointing Direction**

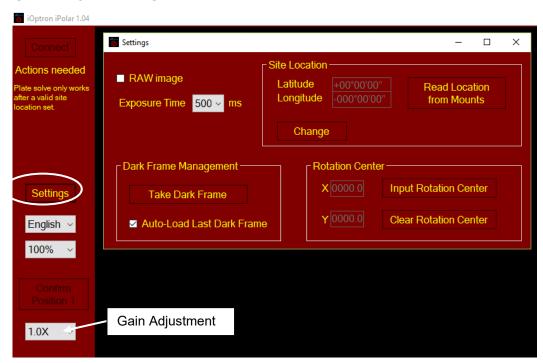

Set the counterweight shaft at the lowest point. Adjust the altitude to you latitude. Point the mount to true north (or true south if located in southern hemisphere).

#### Step 2. Initialization iPolar

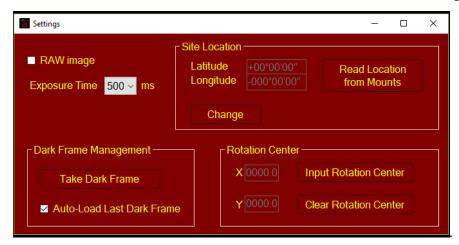

- (1) Run downloaded iPolar software to bring up the polar alignment main menu;
- (2) Click on "Connect" button to connect the iPolar to the computer. The software will start to initialize the process the camera is connected successfully. If it fails to connect, check the cable and try it again.

(3) If this is the first time to use iPolar, a dark frame image of the camera needs be taken. Click on **Settings** to bring up **Settings Menu**:

- (4) Adjust **Exposure Time** and **Gain** (from 1.0X pull down menu in main display menu) to obtain a sky image with clear stars displayed;
- (5) Click on Take Dark Frame;
- (6) Follow the on screen instruction to cover the camera, finish taking dark frame and uncover the camera;
- (7) You may check the Auto-Load Last Dark Frame for next time use. Close Setting Menu.

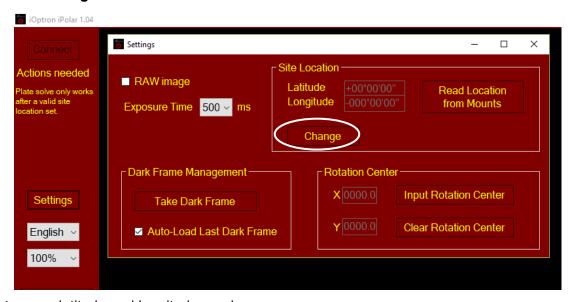

#### Step 3. Set Location

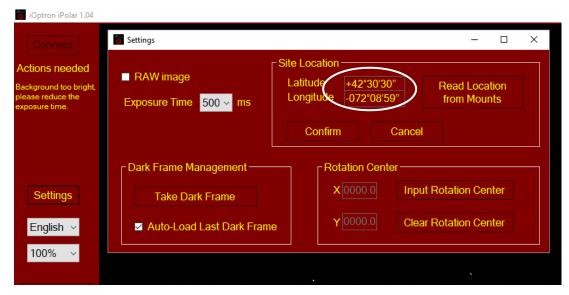

There are two ways to set your observing location info:

#### **Enter Manually**

- (1) Click on Settings;
- (2) Click on Change

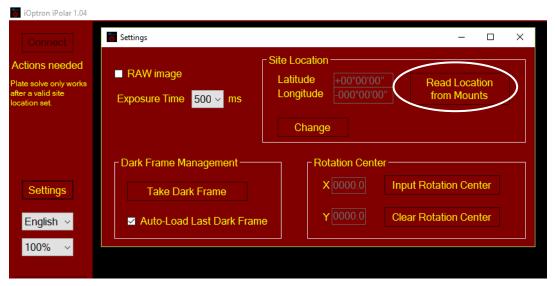

(3) Enter your latitude and longitude numbers:

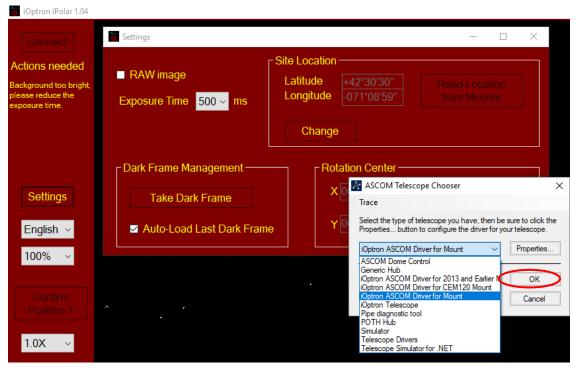

(4) Click **Confirm** to complete the location setting.

#### Read from an ASCOM Supported Mount

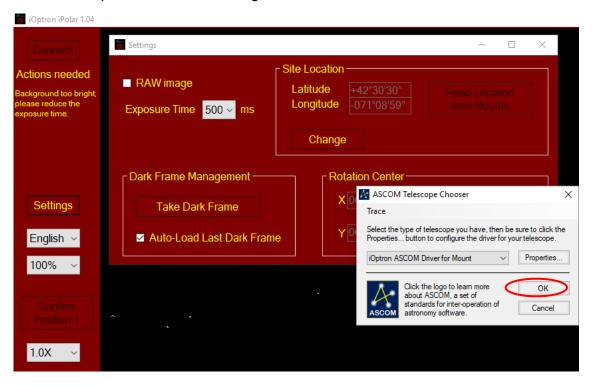

- (1) Click on **Settings**;
- (2) Click on Read Location from Mounts

(3) An ASCOM Telescope Chooser window will occur. Choose "iOptron ASCOM Driver for Mount" from the pull-down menu and click OK.

(4) Click **OK** to complete the location setting.

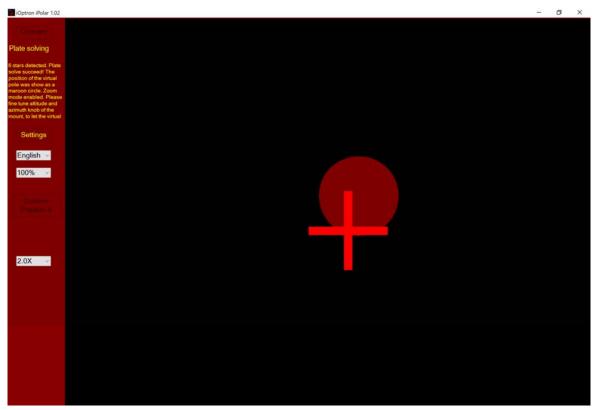

#### Step 4. Plate Solving and Polar Alignment

If the iPolar has been calibrated (see **Section 3** below for calibration), there will be a bright red cross on the screen, which is the polar scope/mount RA axis rotating center. The alignment software will perform plate solving near the pole star area. There is no need to see the pole star, nor a crystal clear night sky.

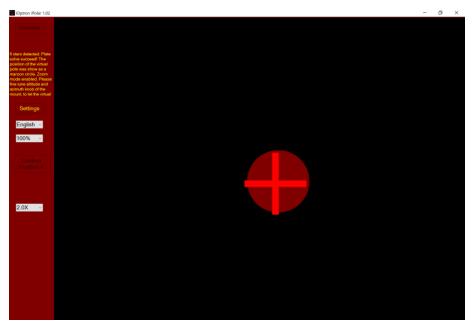

When the camera can see more than 4 stars, it will take the images, enhance the star and darken the background, remove the noise and plate solving the area. It will display the pole with a dark read dot.

Adjust the altitude and azimuth screws to move the read dot towards read cross. The image will be enlarged when they are moving close.

When read dot fully covers red cross, the pole alignment is done.

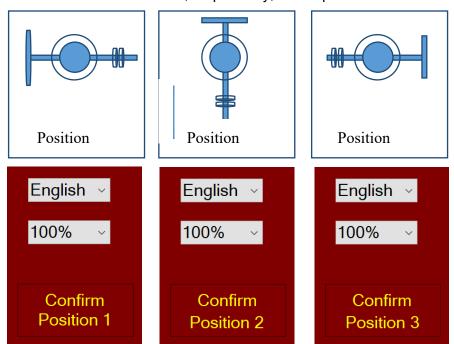

**NOTE:** You can click on **Settings** and check **RAW** to see the real sky image at any time. Please **uncheck** RAW during polar alignment for better results.

#### 3. iPolar Calibration

If do not see the red cross on the screen, the iPolar has not been calibrated. Calibration is only needed after iPolar is installed or any mechanical adjustment has been done on iPolar.

Rotate the RA axis of the mount roughly to the following three positions. Click on **Confirm Position 1**, **Confirm Position 2** and **Confirm Position 3**, respectively, to complete the calibration.

**Note:** If the software does not bring up Confirm Position 2, the initial RA axis is too aloes to the pole axis. Just move the mount away a bit in altitude or azimuth direction and try it again.

### **Appendix D. Gear Meshing Adjustment**

CEM40 gear is designed adjustable by customer although in most cases not necessary. If you experienced DEC/RA motor stall occasionally, or there is free play between the worm and gear, follow this instruction to adjust the gear meshing.

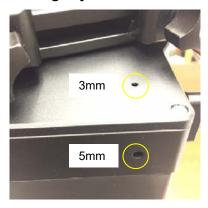

**Tool needed**: 2mm and 3mm hex keys.

#### To Adjust DEC Gear:

Disengage DEC gear switch

Rotate DEC saddle to exposure the small hole (3mm in diameter) that is blocked by the dovetail saddle. Another larger hole (5mm) is located on the side of the DEC gear housing. There is a **set screw** inside the 3mm hole which locks the **gear meshing adjustment screw**, which is inside the larger hole.

Engage the worm/gear by turn the gear switch to locking position.

Insert the 2mm hex key into the small hole on the top. Gently turn the hex key until you feel it is engaged to the set screw inside. You may turn the gear switch further in the lock position if the wrench can't engage the set screw. Turn the **set screw** half a turn counterclockwise to release it.

Adjust the **gear adjustment screw** on the side inside the large hole by using the 3mm hex key. Turn counterclockwise to loosen the meshing or turn clockwise to tighten the meshing.

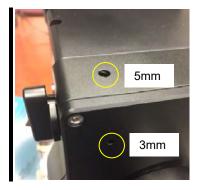

If the motor stalls or the mount does not tracking smoothly, most likely the meshing is too tight. You may loosen it by about 1/8 turn (or less for tracking). *Tighten the set screw in the small hole to LOCK the gear screw (important) before test the mount.* Adjust again if needed, but no more than ½ turn in total.

If you feel there is free play between the worm and gear, you may tighten the gear screw to eliminate it.

#### To Adjust RA Gear:

The RA gear meshing adjustment screw is located next to the RA Gear Switch. The adjustment is same as that for DEC gear/worm.

Please contact <a href="mailto:support@ioptron.com">support@ioptron.com</a> if you need more information.

# Appendix E. Firmware Upgrade

The firmware in the 8407+ Hand Controller and control boards can be upgraded by the customer. Please check iOptron's website, <a href="www.iOptron.com">www.iOptron.com</a>, under Support Documents of the CEM40 product page.

The mount firmware is upgraded via USB port on the mount. The hand controller firmware is upgraded via RS232 port on HC.

### **Appendix F. Computer Control a CEM40 Mount**

The CEM40 mount can be controlled by a SmartPhone, a tablet or a computer. It is supported by two types of computer connections:

- Connect to a computer via USB port on the mount using a USB cable. You may need to
  install a FTDI USB to RS232 VCP driver (<a href="https://www.ftdichip.com/Drivers/VCP.htm">https://www.ftdichip.com/Drivers/VCP.htm</a>). The
  mount can be controlled via ASCOM protocol (Windows OS), or directly by some software,
  such as Sky Safari (Mac OS).
- Connect wirelessly with iOptron iStarFi adapter for CEM40 (#7434). The mount can be controlled via ASCOM protocol (Windows OS), SmartPhone/Pad and Mac OS wirelessly. See iStarFi Instruction Manual for detailed information.

To control the mount via ASCOM protocol, you need:

- 1. Download and install the latest ASCOM Platform, currently 6.4 SP1, from <a href="http://www.ascom-standards.org/">http://www.ascom-standards.org/</a>. Make sure your PC meets the software requirement.
- 2. Download and install the latest iOptron Telescope ASCOM/Commander for CEM40 from iOptron website.
- 3. Planetarium software that supports ASCOM protocol. Follow software instructions to select the iOptron Telescope.

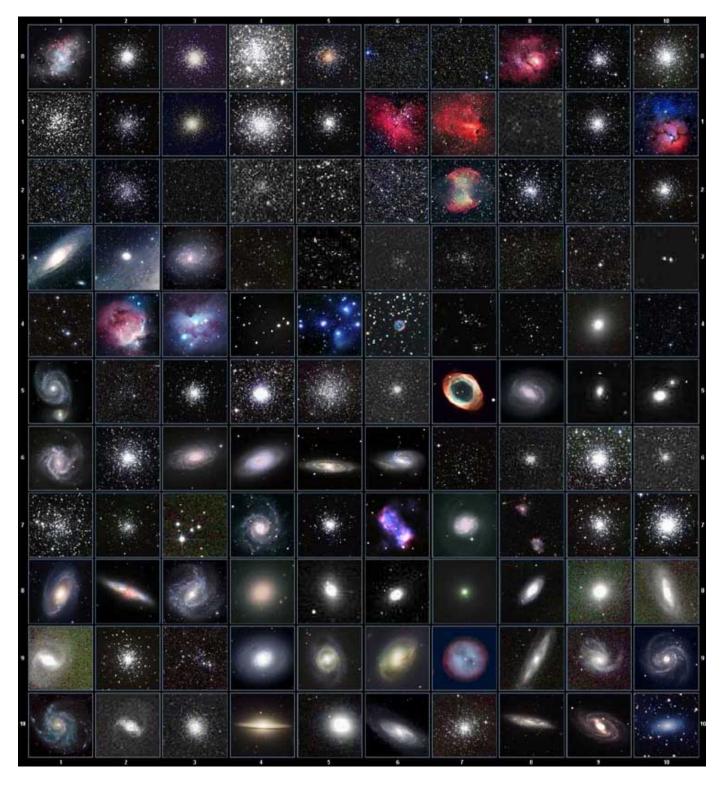

Please refer to iOptron website, <u>www.iOptron.com</u>, under Support Directory/ASCOM Driver, iOptron Telescope ASCOM Driver, for more detail.

#### IOPTRON TWO YEAR TELESCOPE, MOUNT, AND CONTROLLER WARRANTY

A. iOptron warrants your telescope, mount, or controller to be free from defects in materials and workmanship for two years. iOptron will repair or replace such product or part which, upon inspection by iOptron, is found to be defective in materials or workmanship. As a condition to the obligation of iOptron to repair or replace such product, the product must be returned to iOptron together with proof-of-purchase satisfactory to iOptron.

B. The Proper Return Merchant Authorization Number must be obtained from iOptron in advance of return. Call iOptron at 1.781.569.0200 to receive the RMA number to be displayed on the outside of your shipping container.

All returns must be accompanied by a written statement stating the name, address, and daytime telephone number of the owner, together with a brief description of any claimed defects. Parts or product for which replacement is made shall become the property of iOptron.

The customer shall be responsible for all costs of transportation and insurance, both to and from the factory of iOptron, and shall be required to pre-pay such costs.

iOptron shall use reasonable efforts to repair or replace any telescope, mount, or controller covered by this warranty within thirty days of receipt. In the event repair or replacement shall require more than thirty days, iOptron shall notify the customer accordingly. iOptron reserves the right to replace any product which has been discontinued from its product line with a new product of comparable value and function.

This warranty shall be void and of no force of effect in the event a covered product has been modified in design or function, or

subjected to abuse, misuse, mishandling or unauthorized repair. Further, product malfunction or deterioration due to normal wear is not covered by this warranty.

IOPTRON DISCLAIMS ANY WARRANTIES, EXPRESS OR IMPLIED, WHETHER OF MERCHANTABILITY OF FITNESS FOR A PARTICULAR USE, EXCEPT AS EXPRESSLY SET FORTH HERE. THE SOLE OBLIGATION OF IOPTRON UNDER THIS LIMITED WARRANTY SHALL BE TO REPAIR OR REPLACE THE COVERED PRODUCT, IN ACCORDANCE WITH THE TERMS SET FORTH HERE. IOPTRON EXPRESSLY DISCLAIMS ANY LOST PROFITS, GENERAL, SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES WHICH MAY RESULT FROM BREACH OF ANY WARRANTY, OR ARISING OUT OF THE USE OR INABILITY TO USE ANY IOPTRON PRODUCT. ANY WARRANTIES WHICH ARE IMPLIED AND WHICH CANNOT BE DISCLAIMED SHALL BE LIMITED IN DURATION TO A TERM OF TWO YEARS FROM THE DATE OF ORIGINAL RETAIL PURCHASE.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitation on how long an implied warranty lasts, so the above limitations and exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

iOptron reserves the right to modify or discontinue, without prior notice to you, any model or style telescope.

If warranty problems arise, or if you need assistance in using your telescope, mount, or controller contact:

iOptron Corporation
Customer Service Department

NOTE: This warranty is valid to U.S.A. and Canadian customers who have purchased this product from an authorized iOptron dealer in the U.S.A. or Canada or directly from iOptron. Warranty outside the U.S.A. and Canada is valid only to customers who purchased from an iOptron Distributor or Authorized iOptron Dealer in the specific country. Please contact them for any warranty.
